Estimated agricultural waste in the Central Arava

Inorganic waste

2,000 tons = 334 tractors

Date palm fronds

4,500 tons = 750 tractors

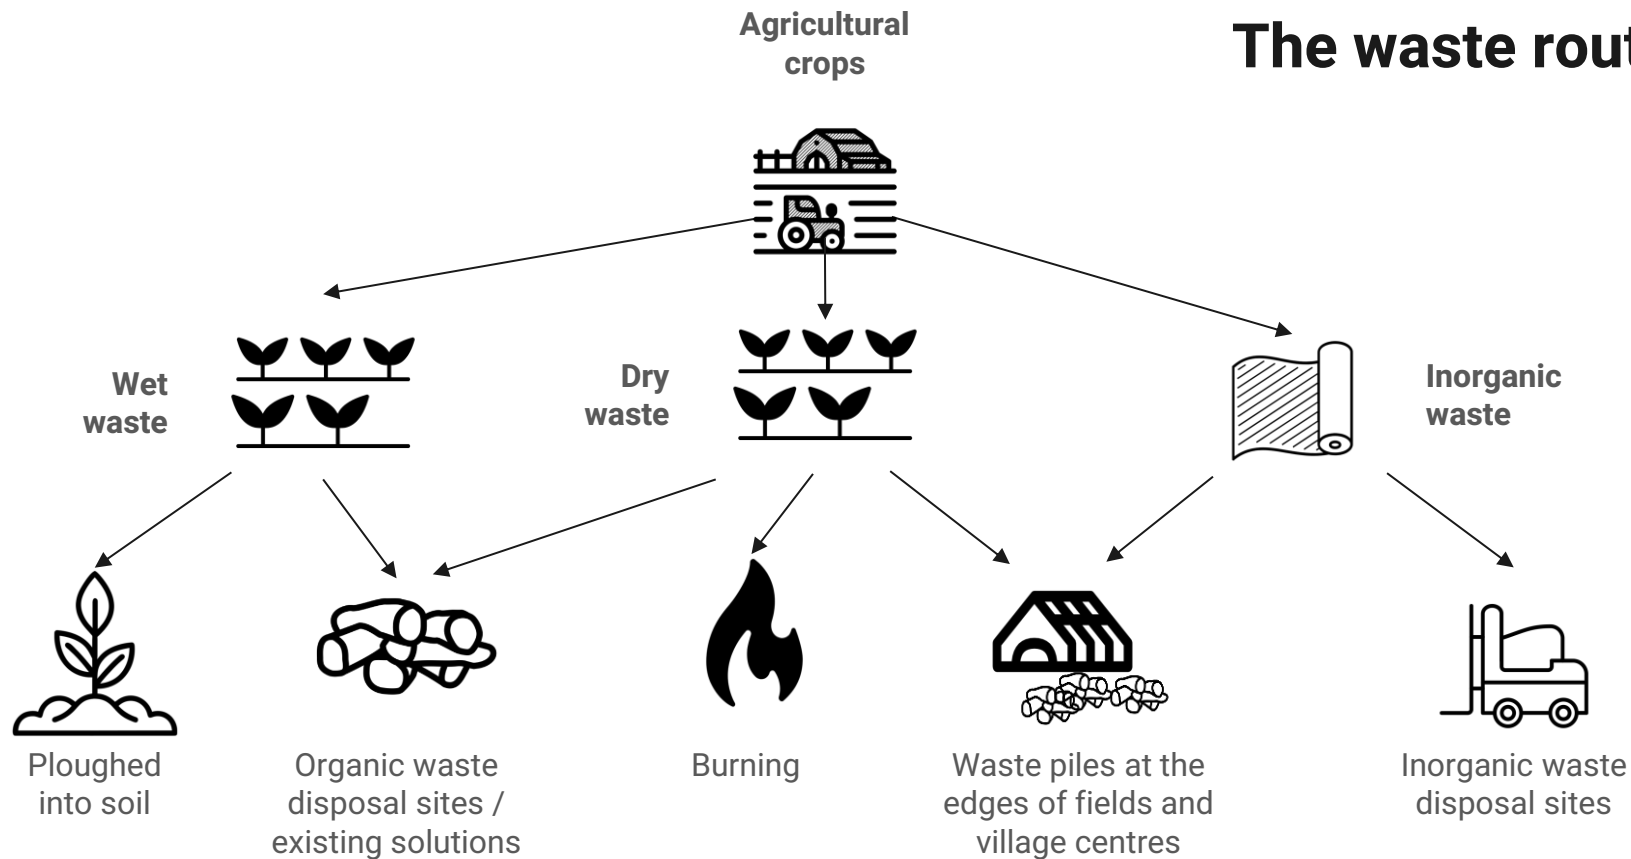

All vegetable crops

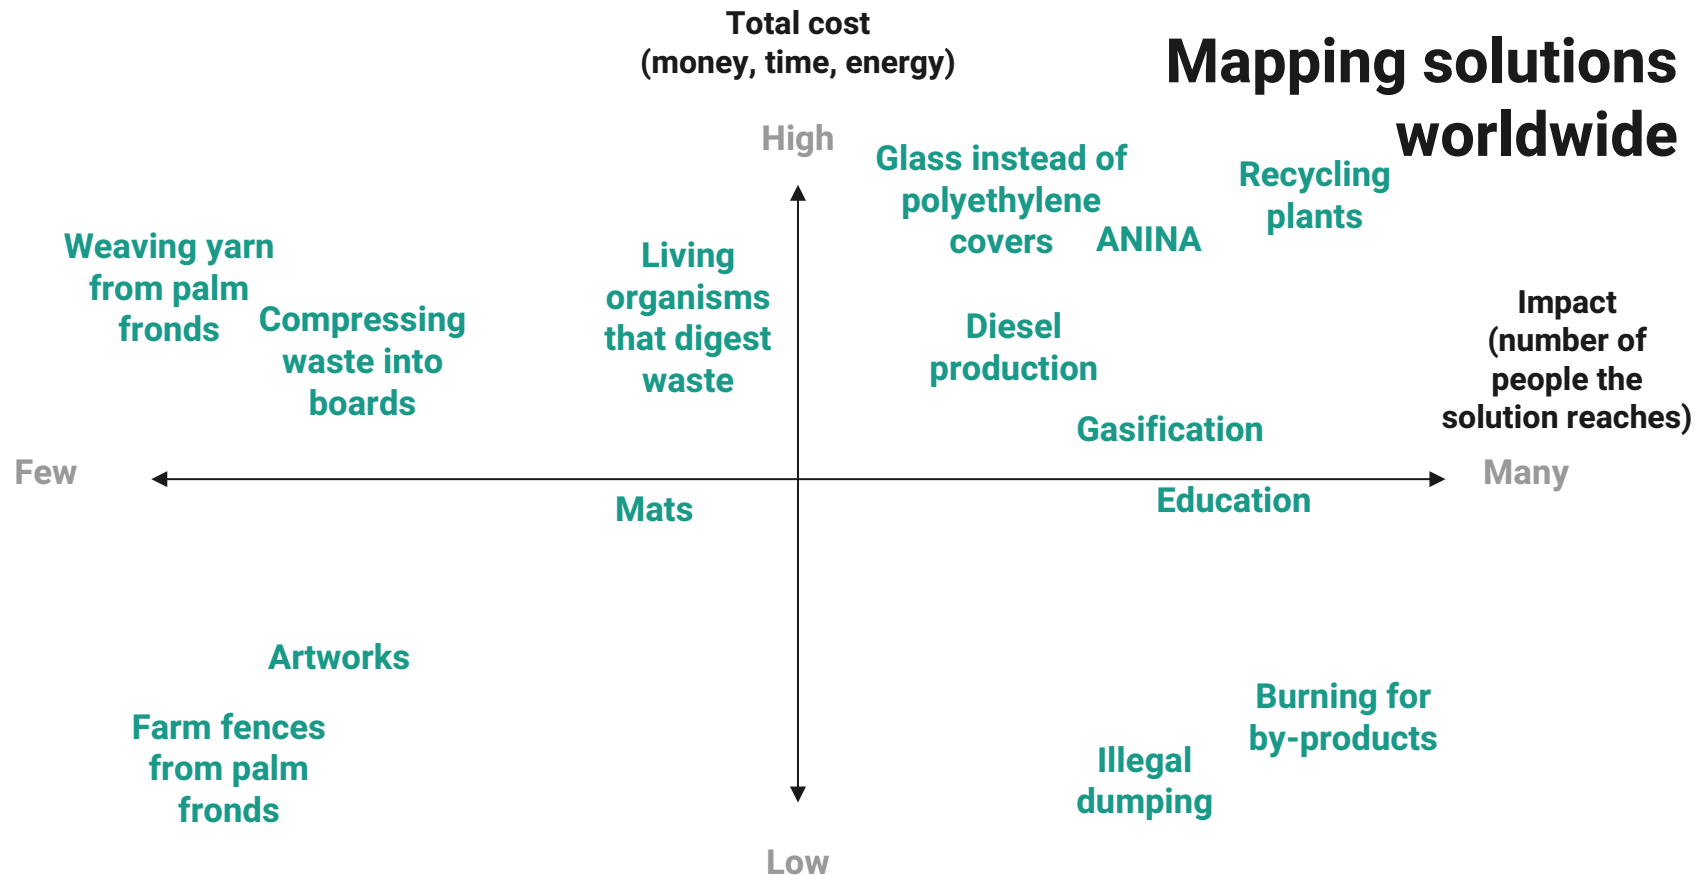

60,000 tons = 10,000 tractors

*Per year | As of 2018 | Agricultural Committee

The waste route

Insights

Waste management
in the Arava requires
ongoing education
and awareness

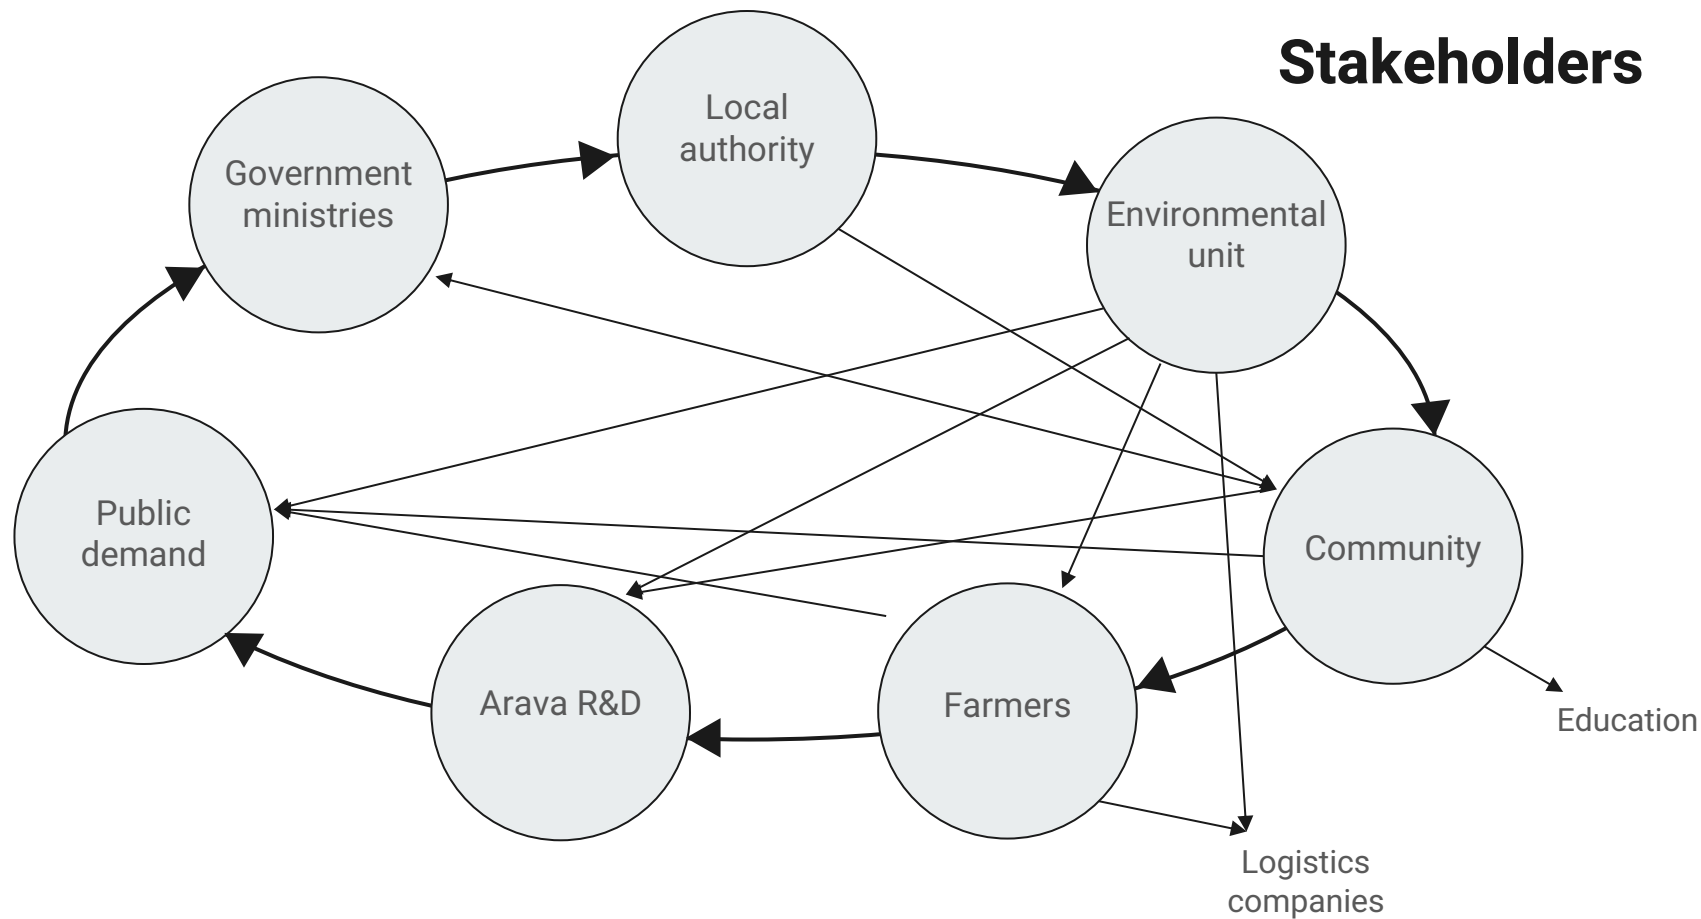

**Residents' acceptance of,
and "indifference" to, the
current situation**

**A lack of
infrastructure and
end-point solutions
for waste, and the
Arava's unique
challenges**

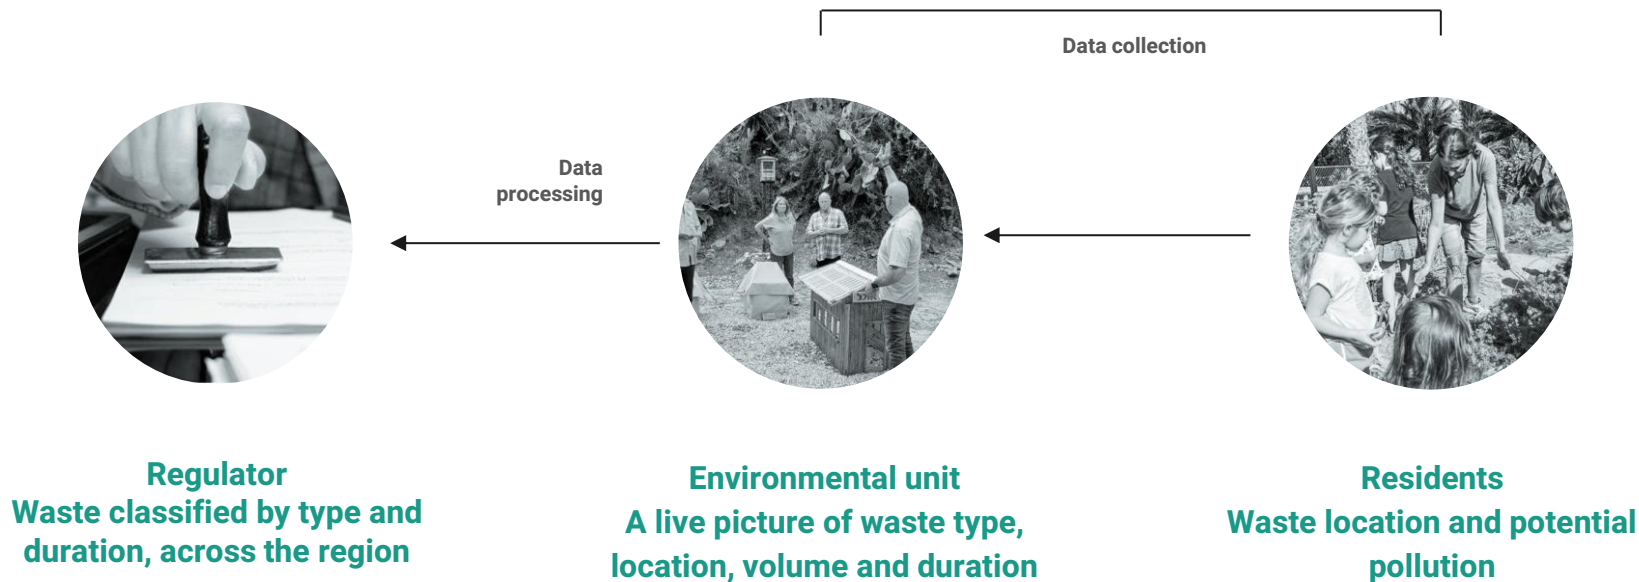

Stakeholders

An aerial photograph of a region in Israel, likely near the Jordan River, with a semi-transparent teal overlay. The text is centered in white. Map labels include 'Ir Ovot', 'Dumela', 'Idan', 'Ein Hatseva', 'Hazeva', 'פנינה בחצבה', 'Hazeva', 'atseva Field School', '90', '2271', 'ISRAEL', and 'JORDAN'.

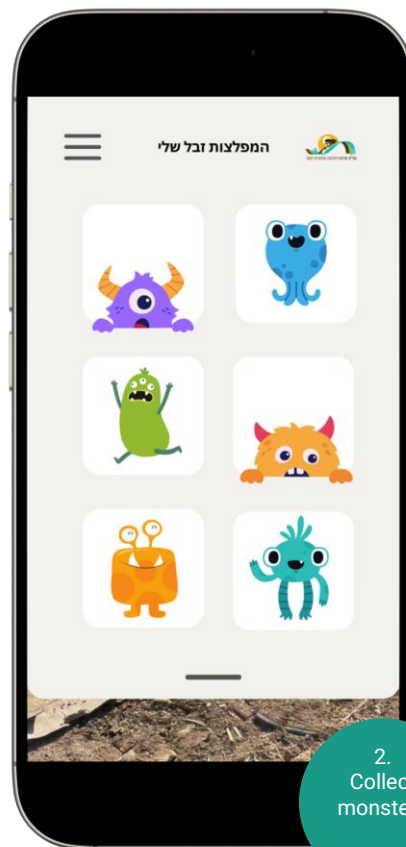

Proposed solution
Community mapping of waste
hazards to build a
comprehensive, always-updated
database that mobilises the
authorities to support end-point
solutions

The platform model

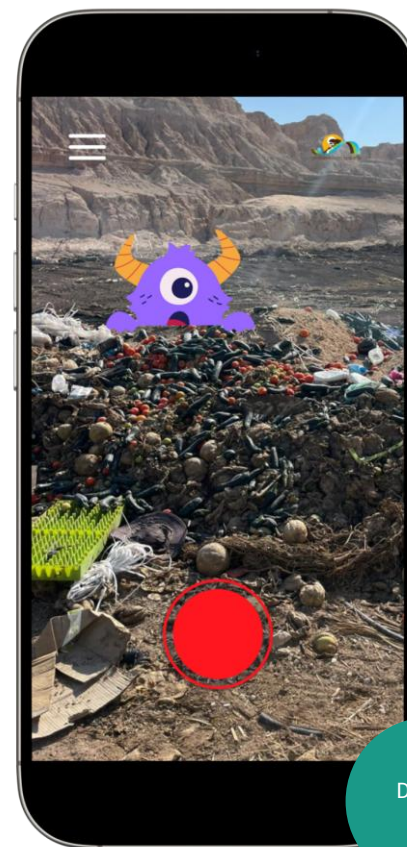

An augmented-
reality game that
collects data
naturally

Designed for
children and
teens

2.
Collect
monsters
